

Player name:

Player Resource Tracker — Form A

One sheet per game

ToC	ToC Spent	TB	TB Spent	SN	SN Spent	DR	DR Spent	QR

Production Nodes

Each PN produces one of its resource, and is included in the resource total at the start of the round.

You can upgrade a PN at an upgrade cost of: Creation cost - 1 of each resource. Each level increases production by 1.

	ToC Node		TB Node		SN Node
	<i>Cost: 2 SN + 3 ToC</i>		<i>Cost: 3 SN + 2 TB</i>		<i>Cost: 6 SN</i>
#	Level	#	Level	#	Level
1		1		1	
2		2		2	
3		3		3	
4		4		4	

	DR Node		QR Node
	<i>Cost: 3 SN + 4 DR</i>		<i>Cost: 2 SN + 4 QR</i>
#	Level	#	Level
1		1	
2		2	
3		3	
4		4	

Round Sheet — Form B

Shared by table

RC Modifier (Choose at start of game: Stable = 1.5 Unstable = 2 Chaotic = 2.5)

SECTION A — REALITY CONSTANT (RC) TRACKER

Each round, fill in:

A1	Current RC	
A2	Round #	
A3	RC Modifier	
A4	Take A2 to the power of A3	
A5	Add A1 and A4, this is your new RC	

Track RC in the table:

R1	R6
R2	R7
R3	R8
R4	R9
R5	R10

SECTION B — TOTAL RESOURCE TRACKER

Fill out the total for all players, referring to each player's Form A for this round. You will do this for each resource.

B1	Total resource	
B2	Total resource Spent	
B3	Divide B2 by B1 (Spent / Total)	
B4	Subtract 0.6 from B3	
B5	Square B4, this is your scaling factor	
B6	If B3 < 0.5, then add B5 to 1 If B3 > 0.5, then subtract B5 from 1 If B3 = 0.5, then do not modify B5	
B7	Multiply B6 by the previous coefficient from Section C, this is your new coefficient, update Section C	

SECTION C — COEFFICIENT TRACKER

Each round, fill in:

C1	Current TB coefficient	
C2	Current SN coefficient	
C3	Current ToC coefficient	
C4	Current DR coefficient	
C5	Current QR coefficient	

Weaving Attempt Sheet — Form C

One per weave attempt

SECTION D—WEAVE ATTEMPT FORM		
D1	TB committed	
D2	Multiply D1 by C1	
D3	SN committed	
D4	Multiply D3 by C2	
D5	ToC committed	
D6	Multiply D5 by C3	
D7	Add D2, D4, and D6, this is your boost	
D8	Current DR for this round	
D9	Multiply D8 by C4	
D10	Current QR for this round	
D11	Multiply D10 by C5	
D12	Divide A5 by 100	
D13	Add 0.5 to D12, this is your baseDrag	
D14	Add D9, D11, and D13, this is your boost	
D15	Divide D7 by D14, this is your Weaving Score	
D16	Add 1 to A5	
D17	Take the natural log of D16— $\ln(D16)$	
D18	Multiply D17 by r , this is the ToRST—See rulebook for r value	
D19	Divide D15 by D18 (WS/ToRST)	
D20	Multiply D19 by 100	
D21	Multiply D20 by k , this is your Success Probability, if the result is >100 , only enter 100—See rulebook for k value	
D22	If QR <7 , enter 0 If QR ≥ 7 and ≤ 9 , enter 3 If QR ≥ 10 and ≤ 12 , enter 6 If QR ≥ 13 and ≤ 15 , enter 10 If QR ≥ 15 and ≤ 18 , enter 15 If QR ≥ 19 , enter 20	
D23	Subtract D22 from D21, this is your adjusted Success Threshold	

Roll a d100. If your roll is $\leq D22$, you successfully weave a ToR. RC decreases by 2. All committed resources are consumed.
 If your roll is $> D22$ your weave attempt failed. Increase RC by 1 and lose all committed resources.

Inflation is evaluated at the end of the last player's turn, before the start of the next round.

[illegible]
